

Product information BI–Vision²

The product **BI–Vision²** is an inlet with a metallic coating which is available in different designs.

Different energy and physical radiation values are reachable with the various designs of the inlet.

BI–Vision² is available by default up to a maximum width of 1,500 mm. BI–Vision² is producible up to a width of 2,400 mm according to the design of the inlet and the volume of the project .

The inlet needs to be recessed if the edges are unprotected. More detailed information about the required recess of the inlet see tolerance table BI–Vision².

Scope of application BI–Vision²:

- Laminated in the glass unit: facades, window, winter garden, overhead-glazing, balustrades/handrails, stairs, separating walls, doors, furniture
- Further applications in connection with glass: fixed in an insulated glass unit
- partition
- advertisement area
- as a design item for furniture
